Skills

Python, TypeScript/JavaScript, LLM Evaluation, Agent Orchestration, Retrieval, Tool Use, Tracing, **FastAPI**, Django, Node.js, **PostgreSQL**, Redis, Docker, Google Cloud Platform (GCP)

Experience

Founder & AI Systems Engineer, Siltpoke – Remote Apr 2026 – Present

- Built Siltpoke, an **independent coding-agent reviewer** using code changes, execution traces, and project context
- Grounded findings in **verbatim tool output**; an evidence guard rejected **491 unsupported claims** in **6,764 runs**
- Benchmarked **graph vs. text retrieval** on planted bugs, with text retrieval showing higher recall and bug coverage
- Established **regression eval suites** for review quality, retrieval, memory, and long-running coding-agent reliability

Founding Engineer, Ripplet – Remote Jun 2024 – Aug 2025

- Led engineering for a **HIPAA-aware, AI-assisted therapist platform prototype** with a cross-functional team
- Developed a **multi-agent RAG pipeline** connecting session transcripts to evidence-based psychological frameworks
- Translated psychologist and stakeholder feedback into **system requirements** and implementation decisions

Full-Stack Engineer & Dev Lead, Tech4Good Lab – Santa Cruz, CA Jun 2023 – Jan 2025

- Led engineers and designers building Pathways, an **AI learning platform** piloted with **100+ university students**
- Reduced staging page load times by **35%** through SSR, lazy loading, and API caching in a Solid.js/Firebase app
- Designed and **A/B-tested LLM prompt variants** to mitigate hallucinations and improve task completion by **15%**

Projects

Project Life Cycle | Python, JavaScript, Shell Apr 2026 – Present

- Built an **agent harness** coordinating researcher, builder, verifier, and reviewer agents throughout development
- Unified **host-specific behavior** across five coding environments in one workflow, including Claude Code and Codex
- Developed a generator for **project-specific agent rules and guardrails** from each codebase’s stack and context

Travel Agent | Python, AutoGen, Ollama, Redis Apr 2025 – Nov 2025

- Developed a **multi-agent pipeline** with web/API retrieval, **critic-driven refinement**, and controlled fallback
- Integrated **Redis-backed session state** to share evidence, intermediate outputs, and feedback across agents
- Ran a **four-way ablation study**, showing critic-driven refinement and fallback recovery improved response quality

Yi | React, TypeScript, Next.js, Django, PostgreSQL Apr 2024 – Sep 2024

- Built and deployed a **B2B operations platform** supporting a small business’s operations and financial reporting
- Implemented **RBAC and JWT authentication** with Django REST Framework for staff, admin, and guest roles
- Reduced API response latency by **30%** to **120 ms** through targeted PostgreSQL indexing in benchmarks

Awards & Publications

- **1st Place, Llama Lounge Agentic AI Hackathon** — Troubadour AI, a context-aware real-time music agent
- **Co-author, IEEE CAI 2025** — “Large Language Models are Autonomous Cyber Defenders” [arXiv:2505.04843](https://arxiv.org/abs/2505.04843)

Education

University of California, Santa Cruz – M.S. Computer Science and Engineering Dec 2025

University of California, Santa Cruz – B.S. Computer Science and Engineering; B.A. Psychology Dec 2022
